

# Prevalence of Diabetes and Prediabetes in Adult Romanian Population

Dr. Paul A. Gagniuc

# PREDATORR

Romanian National Study On The Prevalence of Diabetes, Prediabetes, Overweight and Obesity, Dyslipidemia, Hyperuricemia and Chronic Kidney Disease

- **Protocol number** SRDCEB/2012/001;
- **Eudra CT Number:** 2012-004803-12
- **Beneficiaries:**
  - Romanian Society of Diabetes, Nutrition and Metabolic Diseases (RSDNMD)
  - Romanian Society of Nephrology (RSN)
- **Investigators:** 101 General physician
- **CRO:** CEBIS International ([www.cebis-int.com](http://www.cebis-int.com))
- **Central Laboratory for the analysis of the study:** Synevo

# PREDATORR – Primary goals

- ❑ Estimating the prevalence of **DM and pre diabetes** in the adult population of Romania
- ❑ Estimating the prevalence of **overweight and obesity** in the adult population of Romania
- ❑ Estimating the prevalence of **the chronic kidney disease** in the adult population of Romania

**Note:** Prevalence distribution of the pre-specified subgroups (eg age groups etc) is also expected.

# PREDATORR – Secondary goals

- ❑ Estimating the prevalence of **DLP** in Romania
- ❑ Estimating the prevalence of **Hyperuricemia** in Romania
- ❑ Estimating the prevalence of **Metabolic Syndrome** in the population of Romania.
- ❑ Estimating the prevalence of **HTN** in Romania
- ❑ **CVR** assessment in the population of Romania: **SCORE diagram** for the high-risk areas
- ❑ Metabolic risk evaluation through **FINDRISC score**.

# PREDATORR – Subject inclusion

Subjects were randomly assigned for screening from the list of each GP via a random number generator

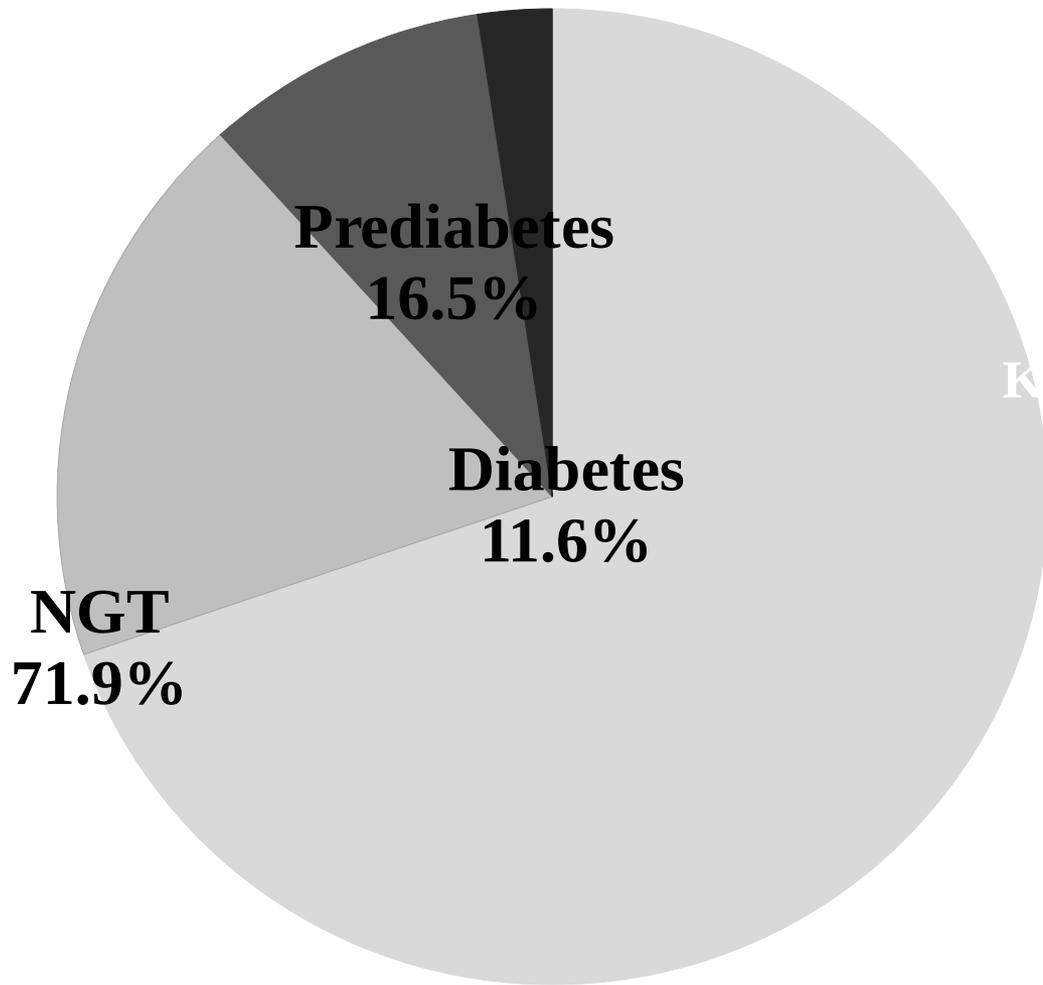

## Inclusion criteria

- Subjects aged 20-79 years
- Born and with residence in Romania
- Living for the past 10 years mainly in Romania
- Included on the list of a GP affiliated with CNAS
- Signing the I.C.

## Exclusion criteria

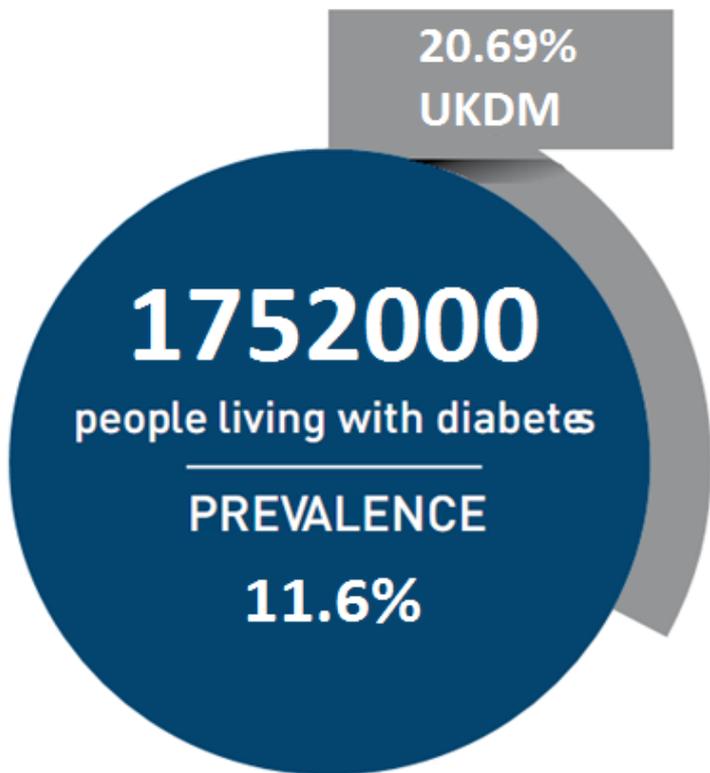

- Subjects aged <20 and >79 years
- Born outside Romania
- Living for the past 10 years mostly outside Romania
- Refuse or can not sign the informed consent
- Pregnant or breastfeeding women

Hypo-HDL cholesterolemia		1.0 (0.8 - 1.3)	0.9 (0.7 - 1.3)	0.9 (0.5 - 1.6)

Normal glucose tolerance was considered the reference category. <sup>a</sup>p <0.05; <sup>b</sup>p <0.01; <sup>c</sup>p <0.001.

# Prevalence of Obesity / Overweight 2013

Population 20-79 Years (Adjusted to Population Distribution — Census)

Underweight

Normal Weight

Overweight

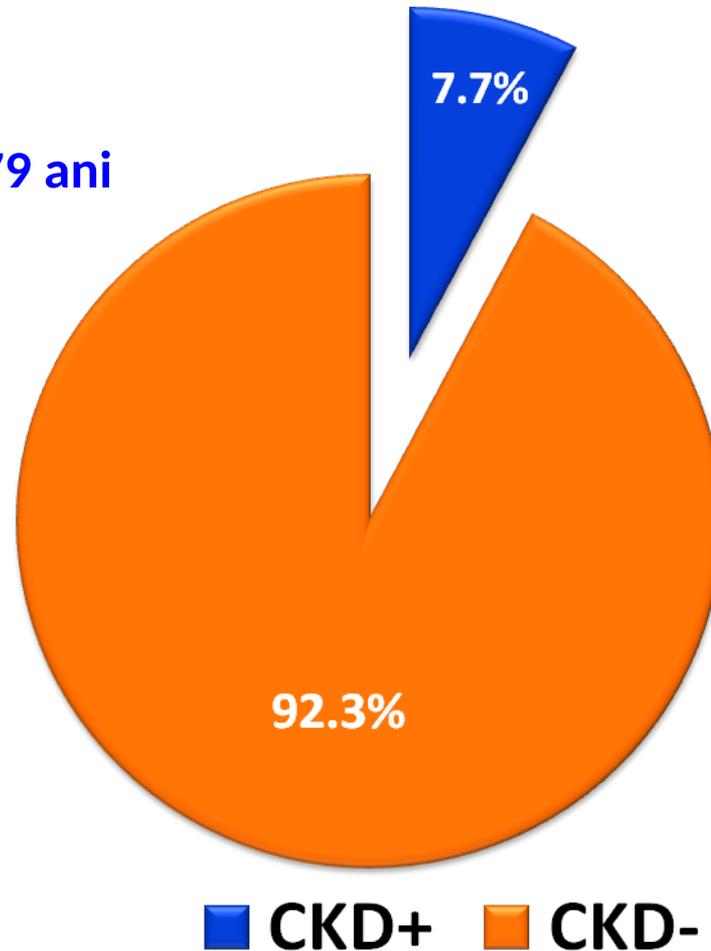

Obesity class I

Obesity class II

Obesity class III

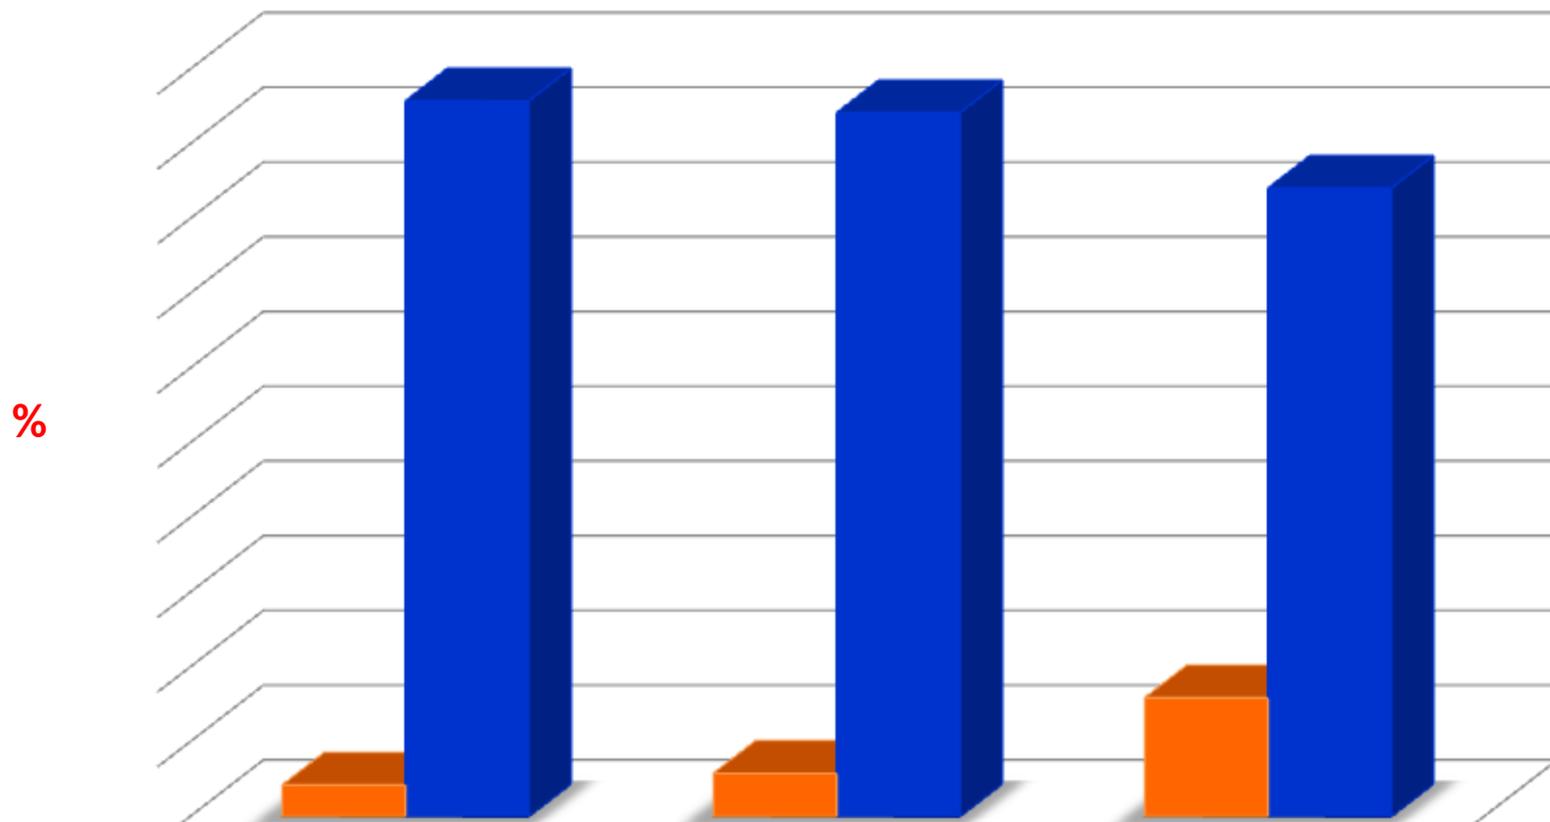

# Prevalence of CKD (eGFR: MDRD) in Romania – 2013 (Adjusted to population distribution – Census)

1.162.505 adulti 20-79 ani

CKD+: eGFR (MDRD) < 60 ml/min/1,73 m<sup>2</sup> and/or ACR ≥ 30 mg/g  
CKD-: eGFR (MDRD) ≥ 60 ml/min/1,73 m<sup>2</sup> and ACR < 30 mg/g

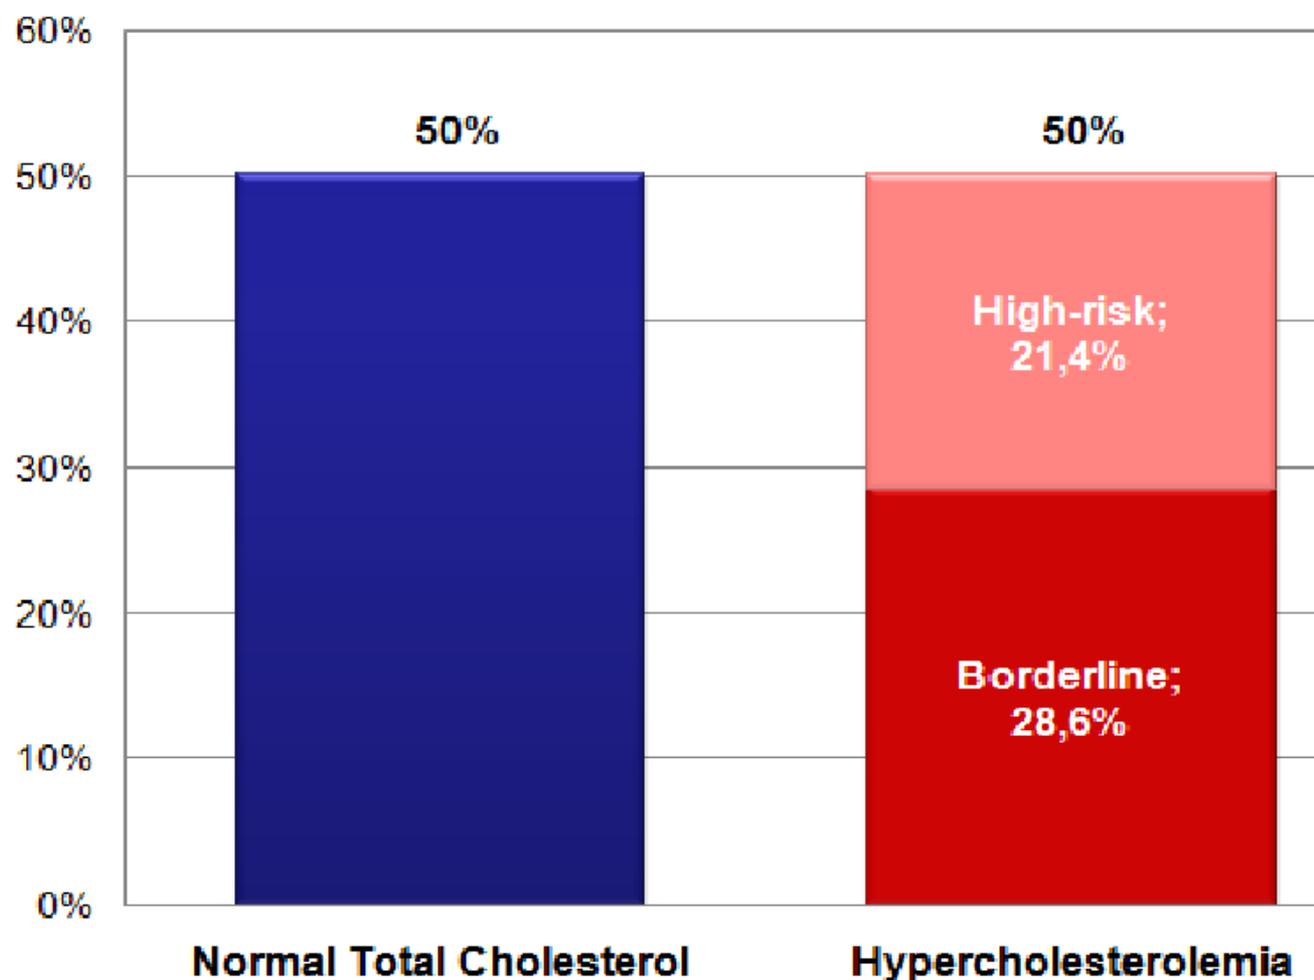

# Prevalence of CKD (eGFR: MDRD) in Romania by age groups - 2013 (Adjusted to population distribution - Census)

	20-39 years	40-59 years	60-79 years
■ CKD+	4.2	5.8	15.9
■ CKD-	95.8	94.2	84.1

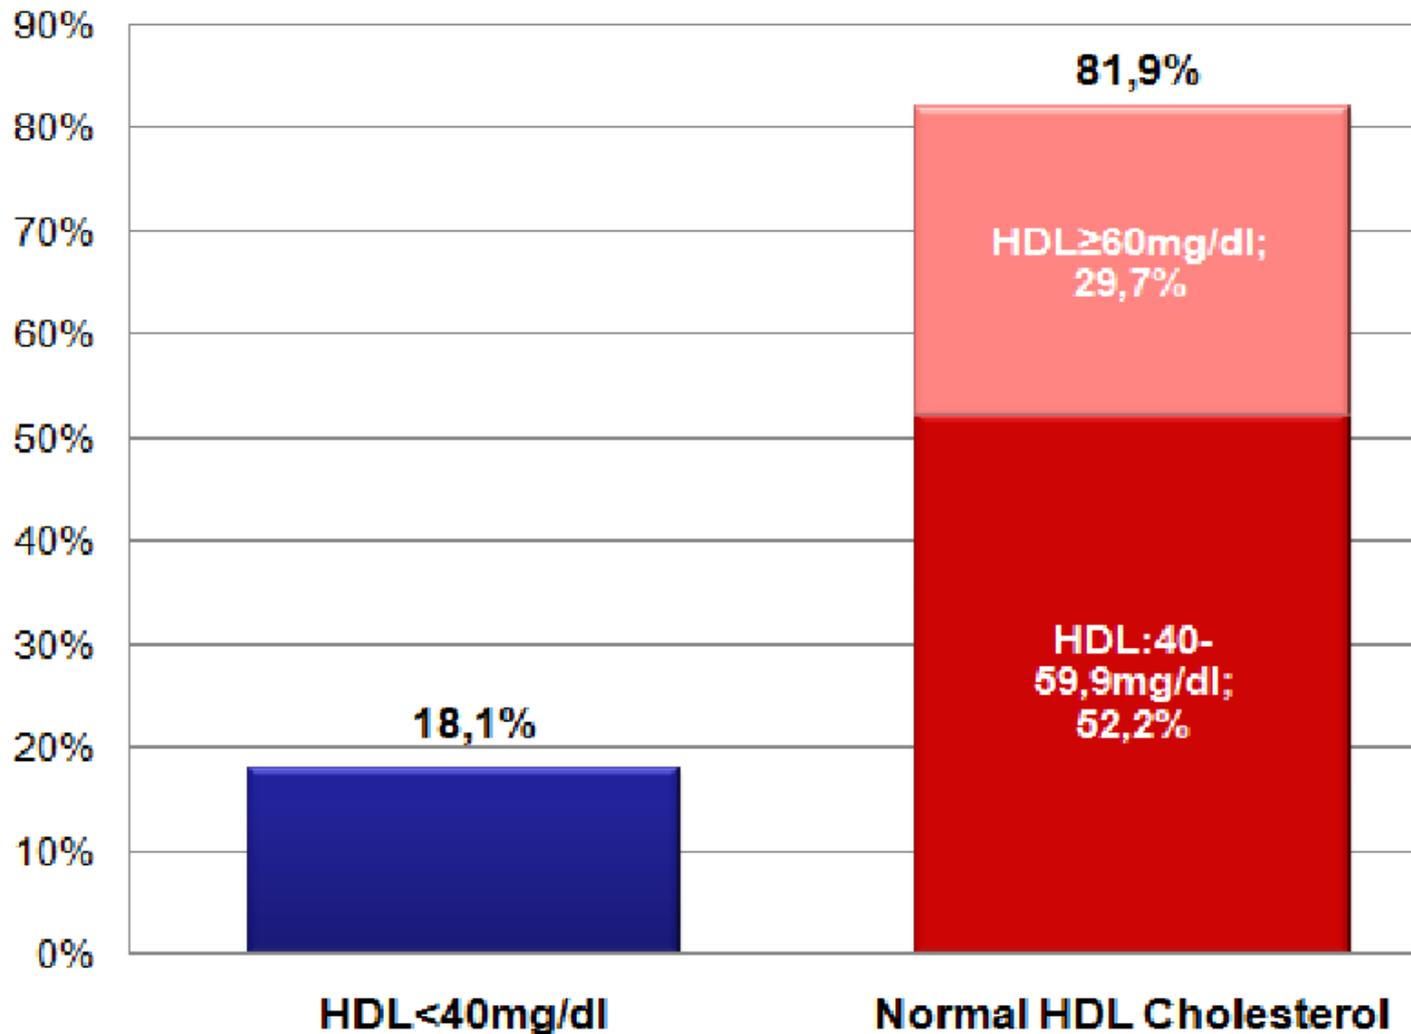

# Prevalence of Hypercholesterolemia - 2014

Population 20-79 Years (Adjusted to Population Distribution — Census)

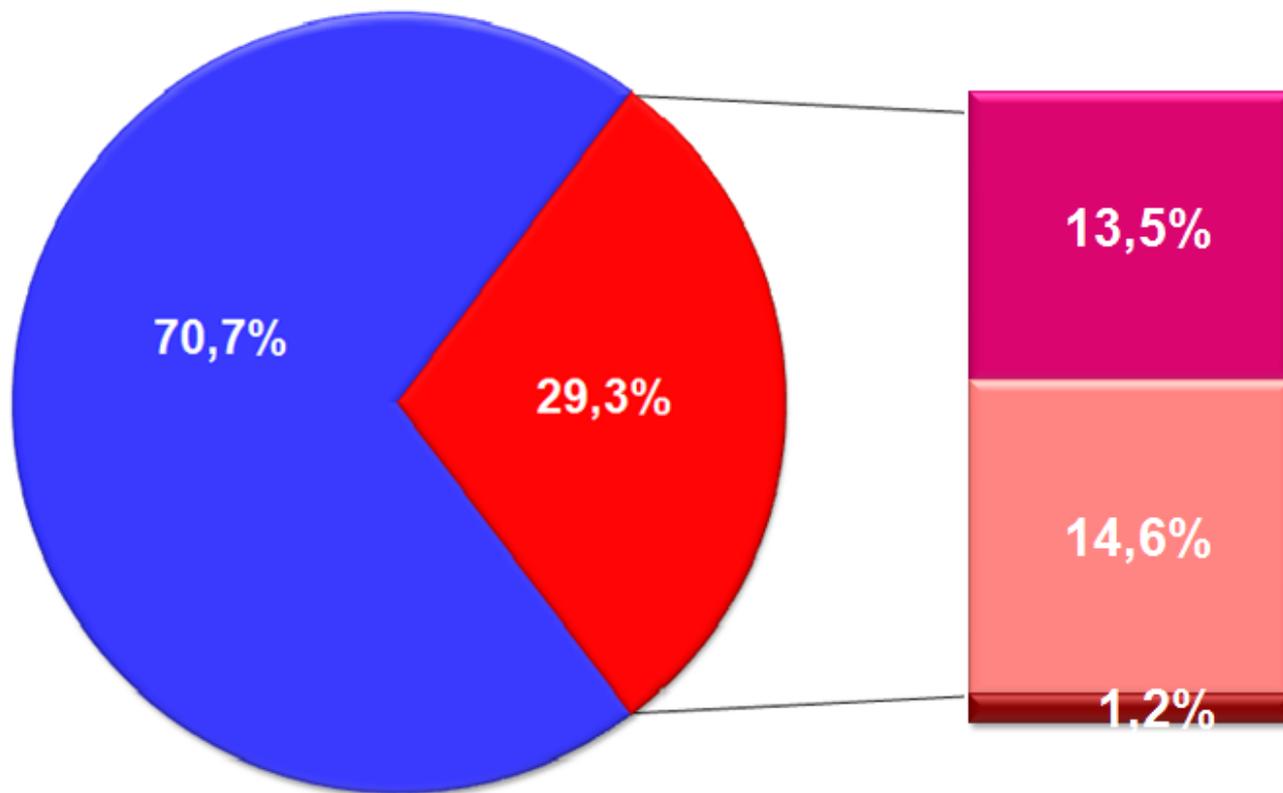

# Prevalence of Low HDL Cholesterol- 2014

Population 20-79 Years (Adjusted to Population Distribution — Census)

## Prevalence of Hypertriglyceridemia - 2014

Population 20-79 Years (Adjusted to Population Distribution — Census)

■ Normal

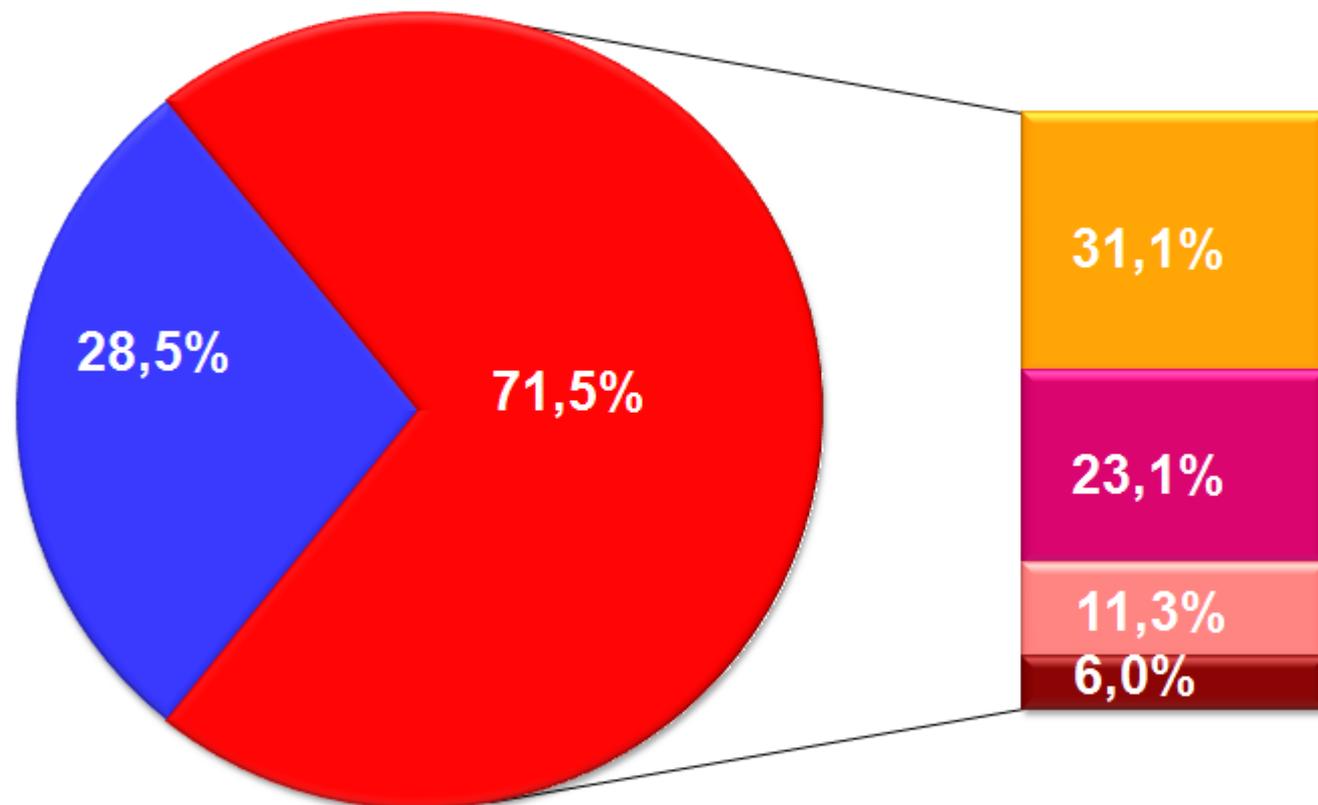

■ Borderline-high

■ High

■ Very high

## Prevalence of High LDL Cholesterol - 2014

Population 20-79 Years (Adjusted to Population Distribution — Census)

■ Normal LDL (<100mg/dl)

■ LDL: 100-129,99mg/dl

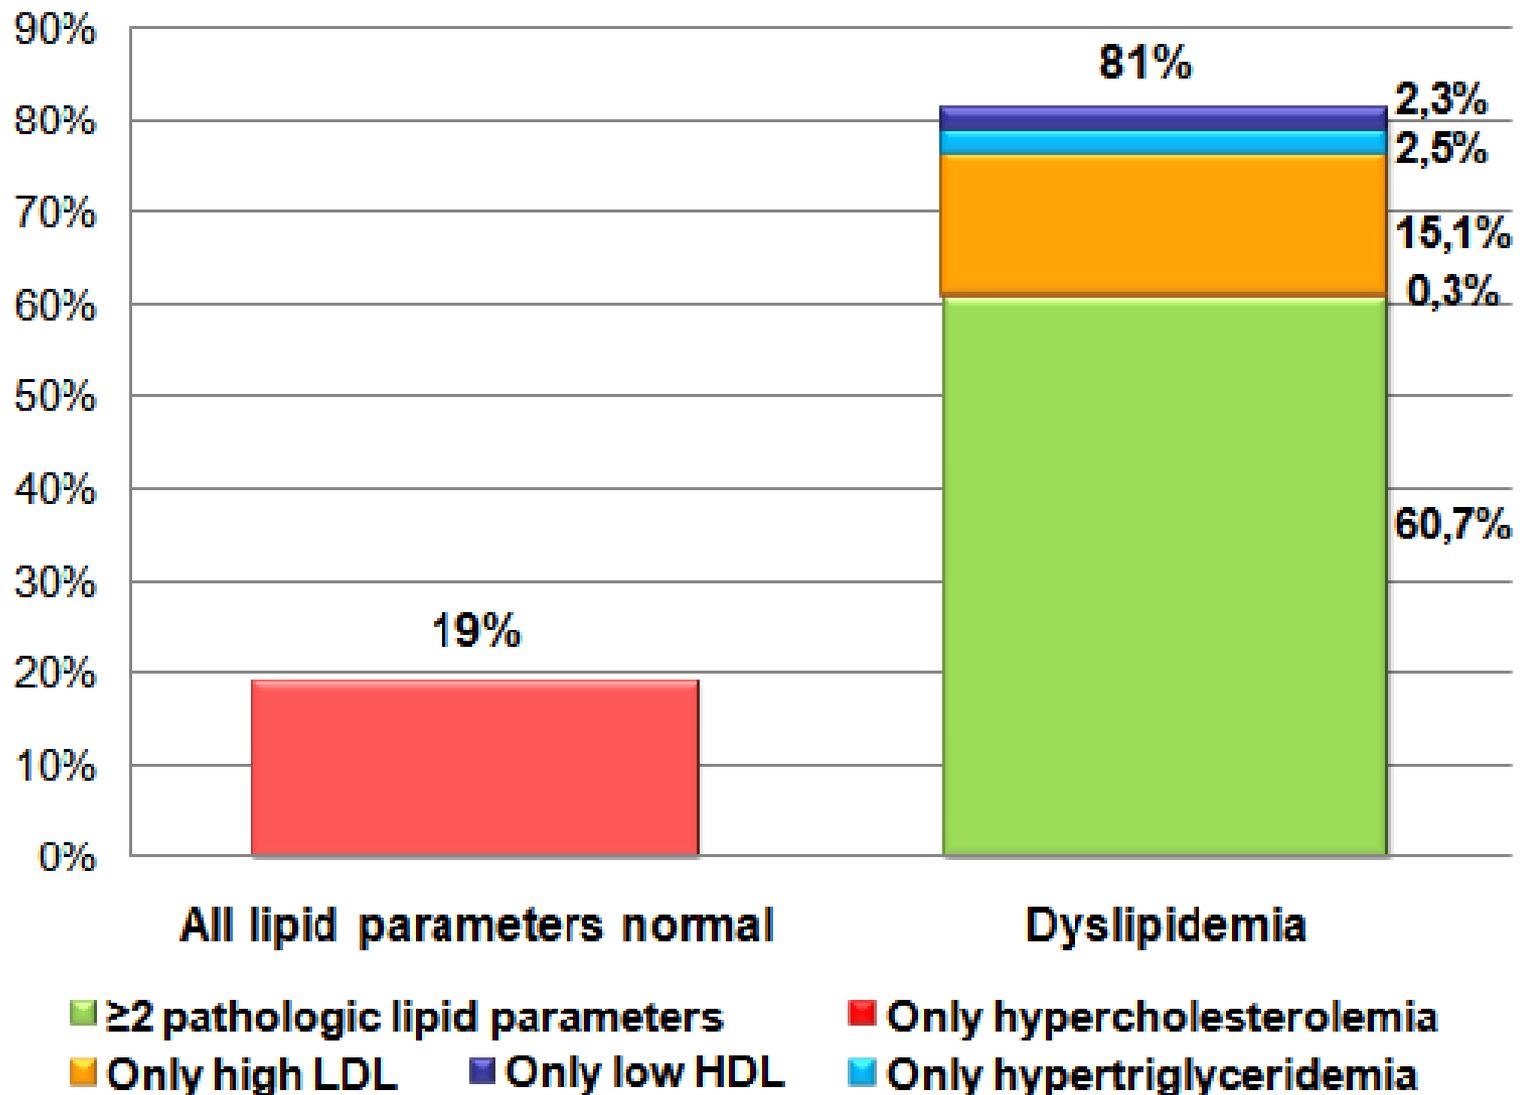

■ LDL: 130-159,99mg/dl

■ LDL: 160-189,99mg/dl

■ LDL ≥190mg/dl

# Prevalence of Dyslipidemia - 2014

(Adjusted to Population Distribution — Census)

# Harmonizing the MetS: IDF Task Force on Epidemiology and Prevention; NHLB; AHA; WHF; IAS; IASO -2009

Measure	Categorical Cut Points
Elevated <b>waist circumference</b> *	Population- and country-specific definitions (Europid: Men $\geq 94$ cm, Women $\geq 80$ cm)
Elevated <b>triglycerides</b> (or drug treatment for elevated triglycerides <sup>†</sup> )	$\geq 150$ mg/dL (1.7 mmol/L)
Reduced <b>HDL-C</b> (or drug treatment for reduced HDL-C <sup>†</sup> )	$< 40$ mg/dL (1.0 mmol/L) in males; $< 50$ mg/dL (1.3 mmol/L) in females
Elevated <b>blood pressure</b> (or antihypertensive drug treatment in a patient with a history of hypertension)	Systolic $\geq 130$ and/or diastolic $\geq 85$ mm Hg
Elevated <b>fasting glucose</b> <sup>‡</sup> (or drug treatment of elevated glucose)	$\geq 100$ mg/dL

\*It is recommended that the IDF or AHA/NHLBI cut points used for people of European origin until more data are available.

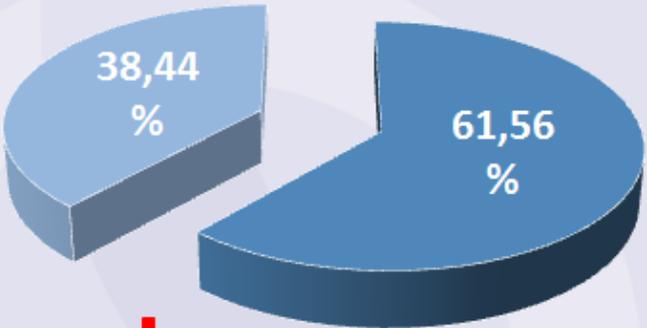

<sup>†</sup>The most commonly used drugs for elevated triglycerides and reduced HDL-C are fibrates and nicotinic acid. A patient taking 1 of these drugs can be presumed to have high triglycerides and low HDL-C. High-dose  $\omega$ -3 fatty acids presumes high triglycerides.

<sup>‡</sup>Most patients with type 2 diabetes mellitus will have the metabolic syndrome by the proposed criteria.

**The presence of any 3 of 5 risk factors constitutes a diagnosis of MetS**

# Conclusions

- The PREDATORR study, for the first time, provides data for Romania on the prevalence of DM and prediabetes and their relationship with important risk factors in a representative sample of the Romanian adult population.
- The final data of the PREDATORR study indicate an increased prevalence of diabetes and prediabetes, which has doubled compared to previous estimations

# Conclusions

- The prevalence of overweight / obesity is above previous estimates, explaining, at least partially, the increased prevalence of diabetes, prediabetes, dyslipidemias, hyperuricemia, hypertension.
- These results are of high value for the health authorities and can be used to help inform decision making in order to initiate the implementation of Prevention program that may reduce the human and economic burden of DM in Romania.
